

**JSTOR In class exercise**  
**HUMN 101W—September 20, 2007**

You can work individually or with a maximum of two other people. Your group must have a laptop to use.

Printed name(s) of the people in your group:

**Objective:** To practice database searching techniques and to discover unique features of searching in JSTOR.

**Assignment:** Your Humanities professor assigns you a short paper about Greek theater using only JSTOR as a resource. There are too many articles on this topic in JSTOR. Experiment with limiting your results using the guideline below. We will be discussing your findings in class and I will be collecting these sheets.

**Part 1:** List ways that you can limit the topic using **features of JSTOR**. For example in Academic OneFILE, you can limit to full text articles. In JSTOR everything is full-text so you can't limit that way, but look in the Advanced Search and other places for ways to limit.

Describe what you did to limit and the results here:

**Part 2:** Clear all your limits from part 1. You can also limit by **changing your search strategy** using Boolean operators and other techniques.

Example: (writing OR composition) AND humanities AND fun = 2897

Write your search strategies to limit your topic and the results here:
